Fund Ratings

Ratings are not a recommendation. Please see below for further information.

Fund Profile

Investment Objective

The objective of the Fund is to achieve long term capital appreciation by way of investing in a globally diversified portfolio of technology companies.

Key Facts

- Team of 12 sector specialists
- The team has 170+ years of combined industry experience
- Typically 60-85 positions
- No benchmark or tracking error constraints
- Fundamentally-driven analysis and stock selection

Fund Managers' Comments

Market review

Global equity markets delivered mixed returns in September, with the MSCI All Country World Net Total Return Index returning -1.5% as a renewed surge in oil prices and the resumption of Federal Reserve (Fed) interest rate hikes pushed bond yields to their highest levels since 2007.

The S&P 500 returned -0.4%** while the NASDAQ 100 gained +3.3%**, helped by a +9.6%** rebound in the Philadelphia Semiconductor Index (SOX) as memory and AI infrastructure stocks recovered. Small caps underperformed large caps, with the Russell 1000 Technology Index gaining +5.1%** and the Russell 2000 Technology Index +1.0%**, while the STOXX Europe 600 Index fell -4.7%** (all returns in US dollar terms).

Technology was the only S&P 500 sector to end the month in positive territory, supported by robust AI fundamental news flow.

US macroeconomic data pointed to a resilient economy. August payroll numbers beat expectations and the flash Composite Purchasing Managers' Index (PMI) for September jumped to 58.4, the fastest pace of activity growth in more than five years, although input costs rose at their steepest rate in four years. Headline CPI rose +0.4% month-on -month (m/m) in August, keeping annual inflation at 3.4%, while core CPI rose +0.3%, slightly ahead of forecasts. Oil prices increased sharply again as the US/Iran conflict re-escalated. Houthi attacks on Saudi energy infrastructure, which forced the temporary closure of the East-West Crude Oil Pipeline, pushed Brent crude back above $100 a barrel. Hopes of a deal faded after President Trump rejected an Iranian proposal, leaving Brent +14% higher on the month at $103.50 a barrel and +42.0% over the quarter. Gold fell -7% as real yields rose and the dollar strengthened.

The Federal Open Market Committee (FOMC) raised rates by 25bps to 3.75-4.00%, its first hike since 2023. Sixteen of the eighteen participants expect at least one further increase this year. Fed Chair Kevin Warsh said that, despite solid employment data, inflation remained too high and that the Fed would deliver on price stability. Strong activity data, higher oil prices and heavy corporate debt issuance pushed the 10-year Treasury yield through 5%, closing the month at 5.29%, its seventh consecutive monthly increase. Other central banks followed a similar path; the European Central Bank raised its deposit rate by 25bps to 2.50%, its second hike this year, and the Bank of Japan lifted its policy rate to 1.25%, the highest since 1995.

The month ended more positively. Core personal consumption expenditures (PCE) inflation for August came in below expectations at 3.0% year-on-year (y/y), while the final estimate of Q2 GDP was revised higher to 2.2% from 1.5%. Despite rising global bond yields, economic data remains robust and corporate earnings are expected to exceed estimates once again in the upcoming Q3 reporting season. This should support a positive backdrop for equities.

Fund performance

The Fund (I USD Share Class) rose +7.1%, strongly outperforming the Dow Jones Global Technology Net Total Return Index (W1TECN), which rose +4.3% (all returns in US dollar terms). Performance was mostly driven by the Fund's holdings in semiconductors and AI capex beneficiaries, which rebounded sharply during September.

Year to date, the Fund has gained +60.8% compared with +29.9% for its benchmark, putting it in the top decile of its Lipper peer group. Performance has benefited from our broad exposure to AI enablers and our expansion into the wider AI infrastructure stack, positioning we have built largely since the beginning of 2024.

We continue to believe a market moving this quickly demands truly 'dynamically active' management – something incompatible with static, passive ETFs which we think remain poor conduits for AI-driven returns. We attend not only investor conferences but also trade shows, facility tours and industry events to see first-hand how AI is driving markets. Having run a dedicated AI fund for nine years, we believe we are well placed to identify discontinuous technological change early. Most importantly, we are embracing AI ourselves in many ways, both to boost analyst productivity and also for screening and lead generation (not for investment decisions, which remain analyst- and fund-manager driven).

We ourselves are also directly benefiting from improved model performance, groundbreaking coding capabilities, rising autonomous task duration and agentic expertise. This combination dramatically accelerated our AI use and made previously impossible or unjustifiable projects viable. It has also increased our confidence that AI will reshape every sector, in unimaginable ways, over shorter timeframes than most believe possible. The recent pace of model progress is hard to comprehend, even for those at the cutting edge of AI model development and almost impossible if you are not using its full capabilities today. In our view, this is leading many investors to underestimate the likely return on investment and subsequent duration of this cycle.

Technology review

The technology sector outperformed the broader market in September, with the Dow Jones Global Technology Index (W1TECN) returning +4.3%. Large-cap technology stocks continued to outperform small and mid-cap peers: the Russell 1000 Technology Index and Russell 2000 Technology Index returned +5.1%** and +1.0%**, respectively.

Subsector performance reversed sharply from August as investors began to add to AI exposed stocks. The Philadelphia Semiconductor Index (SOX) rallied +9.6%**, while the NASDAQ Internet Index (QNET) and iShares Expanded Tech-Software Sector ETF (IGV) declined -3.5%** and -3.2%**, respectively.

During September, debate around the pacing and alignment of frontier AI models intensified, with Anthropic's Dario Amodei, OpenAI's Sam Altman and xAI's Elon Musk agreeing that 'pacing' of frontier model development is required to ensure safety. Initially, this led to a selloff in hardware and semiconductors on the assumption – erroneous, in our view – that pacing would slow the buildout of AI infrastructure. However, these names rebounded strongly as investors recognised that greater scrutiny of model training, post-training and reinforcement learning may require more compute, not less, and should help drive AI adoption.

Performance was also driven by continued strength in CPU makers Advanced Micro Devices (AMD) and Intel and related supply-chain stocks, following the successful launch by Meta Platforms (Meta; u/w) of Muse, a personal AI agent capable of autonomously completing complex, multi-step tasks such as booking travel, completing forms and shopping. Muse has topped the US App Store since its release and has been described as the "ChatGPT moment" for agentic commerce. Rapid early adoption, supported by Meta's extensive distribution, underscored the significant compute opportunity from consumer AI agents. This supported AI infrastructure stocks such as Celestica, FormFactor and Bloom Energy, and especially CPU vendors AMD and Intel, given the CPU-intensive architecture of Muse's dedicated virtual machines and the nature of their workloads.

Commercial momentum was also strong, with Meta announcing integrations or partnerships with Walmart*, Best Buy*, Shopify, Expedia*, Instacart*, Gap*, Wayfair* and Fanatics*. However, Muse also highlighted the potential disruption to internet advertising and e-commerce as agents increasingly intermediate consumer relationships. Amazon's decision to block Muse from its marketplace underscored emerging tensions around ownership of customer relationships and the potential impact on advertising economics. Meta's agentic success also reminded investors of the risk to software stocks from agentic AI. Its

Performance relates to past returns and is not a reliable indicator of future returns.

It should not be assumed that recommendations made in future will be profitable or will equal performance of the securities in this document. A list of all recommendations made within the immediately preceding 12 months is available upon request.

push into the enterprise, to help businesses use AI via a new 'Enterprise Platform' led by CJ Desai – hired from MongoDB (our remaining small position recently sold due to his departure) – weighed on sentiment towards application software stocks such as ServiceNow and the RBC SaaS Index fell -10.0% during the month.

September featured several notable off-cycle earnings releases. In semiconductors, Broadcom delivered solid results, with revenue up +86% y/y and AI semiconductor sales rising +221% y/y, partly offset by slightly weaker-than-expected infrastructure software and non-AI semiconductor demand. Management raised FY27 AI revenue guidance from more than $100bn to $115bn, but below the $120bn consensus, although supply constraints leave upside potential. The company also forecast AI semiconductor sales doubling to $230bn in FY28 – a bullish read-through for broader AI infrastructure demand. We expect growth to increasingly come from custom chips for Anthropic* and OpenAI*, which are set to become Broadcom's two largest customers.

Micron Technology delivered another exceptional quarter that met elevated expectations: data centre revenue quadrupled y/y, helped by strong pricing across DRAM and NAND. Management expects supply/demand conditions to be even tighter in FY27 and FY28 than in FY26, supporting further pricing and margin expansion. FY27 capex is expected to rise to more than $50bn, primarily to accelerate cleanroom construction, although we believe meaningful additional supply will not arrive until late calendar 2028. Long-term agreements now extend to 2031, reinforcing visibility into a prolonged memory upcycle.

Infrastructure software results were also constructive, with AI adoption supporting stronger growth. Snowflake delivered a strong quarter, with product revenue growth accelerating to +37% y/y. Guidance points to a further acceleration next quarter, supported by what management expects to be a "meaningful step up" in AI revenue. Cortex Code, the company's AI coding assistant, was adopted by more than 9,100 accounts in the quarter, while AI-driven migrations are increasing consumption of Snowflake's core platform.

In the cybersecurity subsector, Palo Alto Networks reported a solid quarter, with revenue up +34% y/y and next-generation security annual recurring revenue (ARR) rising +63%. AI adoption is increasing demand for stronger enterprise security as companies deploy autonomous agents. Prisma AIRS, which identifies vulnerabilities and protects AI applications, models and agents from data leakage and unauthorised actions, reached $120m in ARR within a year, becoming Palo Alto Network's fastest-scaling product.

Cybersecurity stocks also benefited from Amodei's call for a more measured pace of AI development following several security incidents, including the OpenAI/Hugging Face breach and reports of AI agents compromising government systems. Rather than halting progress, he advocated stronger testing, monitoring and alignment before advanced models are deployed, particularly as the industry approaches recursive self-improvement (RSI), when AI systems may begin accelerating the development of more capable successors.

A more sceptical interpretation is that tighter regulation could reinforce the competitive position of the frontier AI labs. Leading labs possess the compute, capital and compliance infrastructure to absorb stringent oversight, while licensing, auditing and safety requirements could disproportionately burden smaller and open-source competitors. Regulation may therefore address legitimate safety risks while raising barriers to entry and entrenching today's market leaders. OpenAI subsequently held back the model it had intended to ship as GPT-6.1 Astra after it fell short on safety tests, saying "it didn't quite meet the bar in terms of staying within scope and authorization".

At month end, Reuters reported details from a leaked Anthropic S-1 filing ahead of an anticipated IPO. The filing indicated that revenue increased by more than 10x y/y to around $4.6bn in 2025 and that Anthropic has committed around $518bn to future cloud, compute and infrastructure spending. If accurate, the figures suggest frontier AI demand remains materially undersupplied – a supportive signal for hyperscalers and vendors across compute, networking, memory and semiconductor capital equipment.

The largest contributors to relative performance during the month were Advanced Micro Devices, Sandisk, FormFactor, Celestica and Intel for reasons already mentioned.

The largest detractors from relative performance were Amazon, Elite Material – which fell on concerns that future adoption of co-packaged optics (CPO) could reduce demand for its highest-spec AI server copper-clad laminate (CCL) – Meta Platforms (u/w), MongoDB and ServiceNow.

Outlook

The macroeconomic environment remains an overhang on market sentiment. Robust growth and persistent inflation are putting upward pressure on long-term yields – 10-year Treasury yields have increased for seven consecutive months. Historically, a two-standard-deviation rise in 10-year yields within a single month (around 50bps; September's move was 53bps) has put the market under some strain, but the strength of AI fundamentals and earnings power has so far proved supportive to market cap-weighted indices.

The AI investment boom is driving nearly half of S&P 500 earnings growth this year (excluding other income) and is expected to continue to make a similar – if moderating – contribution to 2027 and 2028, according to Goldman Sachs. Earnings estimates have risen over the course of the year, in stark contrast to most years, when they tend to decline as the year progresses. However, market breadth has deteriorated, with the median stock trading around 16% below its 52-week high even as the S&P 500 itself sits close to record highs. Rate-sensitive sectors have unsurprisingly struggled, with biotech, small caps, REITs, homebuilders and utilities suffering drawdowns.

Encouragingly, the most recent move higher in rates has been driven by an increase in real yields rather than breakevens, "consistent with markets repricing the strength and persistence of growth…and the real rates required to accommodate it", according to Citadel. Stable breakevens indicate the market has confidence in the Fed's capacity and willingness to hike rates to control inflation as required. Higher yields have, however, compressed valuation multiples: the S&P 500's forward P/E has fallen from 22x to 19x this year and the NASDAQ 100's from 27x to 22x. The S&P 500 information technology sector's multiple is down by almost one-third, according to Goldman Sachs.

The cost of capital is becoming an increasingly important input as AI investment expands to support greater capability and rapid adoption. Interest expense is today a small portion of hyperscaler earnings, although it will grow. Goldman Sachs expects around $250bn of issuance this year (almost all of it already completed) and around $420bn of gross issuance in 2027. Despite this material step-up, only 35% of 2027 hyperscaler capex is expected to be funded by debt.

AI data points remain encouraging. Model progress – the animating force of the AI trade – continued at breakneck speed and emphasised the falling cost of intelligence rather than headline capability alone. OpenAI launched GPT-6 Astra on 3 September as its most powerful model for professional work, coding and reasoning. Google followed with Gemini 4 Argon, which has a one million token output limit and targets coding, cybersecurity defence and knowledge work such as financial research and legal drafting. Anthropic's Claude Opus 5.5 offered performance comparable to its recently released Claude Fable 5.1 on most tasks, while costing around 40% less to run than its predecessor.

OpenAI has also re-established itself at the frontier. The company is growing rapidly and should be approaching $70bn in annualised revenue by year end. OpenAI also generated more consumer revenue in

Performance relates to past returns and is not a reliable indicator of future returns.

Q3 2026 than in the whole of 2025, and ChatGPT has 1.2 billion weekly active users, up from 900 million in February.

In another sign of widening AI supply/demand imbalance, the price of compute continues to rise. CoreWeave* announced plans to raise GPU hosting prices by a further 10% over the coming months, on top of a +25% increase in July. Nebius* lifted selected NVIDIA GPU-hour rates by +16.9-21.0% on its 1 October on-demand card, including last-generation H100s.

Recent comments from AI leaders – Amodei's essay *We Must Pace the Frontier*, backed by Musk and Altman, alongside warnings about RSI and the risk of AI escaping human control – have become an increasingly important dimension of the AI narrative. The timing of this step-up in safety concerns may reflect genuine alarm, given how close some of the latest models appear to be to artificial general intelligence (AGI) or the arrival of RSI. It may also reflect a desire by the labs to insulate themselves from blame – to be able to say: "We told you" if something does go wrong. The timing may also be linked to Anthropic's rumoured IPO, given the challenges of filing for a public listing shortly after warning that its own product could pose an existential risk.

While we cannot know the motivations driving the 'safety' debate, we do not believe Amodei's comments are a signal that AI progress is about to slow. Rather, we read them as implying that, if anything, the frontier has been moving considerably faster behind the scenes. This fits a pattern we have highlighted before: AI progress tends to be discontinuous rather than linear, improving only modestly for long stretches before unlocking rapid, often exponential adoption once a capability threshold is crossed.

We think of it like carrying a second pilot in the cockpit: the stakes are high and safety is paramount so a co-pilot is clearly needed, but the aircraft is not about to slow down, let alone be grounded. The public statements from the labs themselves support this. OpenAI's Chief Financial Officer Sarah Friar was explicit that pacing does not imply a broader slowdown in capital spending. Its vice president of compute, Sachin Katti, went further, saying the industry will need more compute, not less.

Of course, the safety debate has highlighted the potential for greater future scrutiny of AI model progress – an upside risk we have flagged previously. Returning to our aviation parallel, the safety debate is probably best understood as 'greater turbulence' to the narrative the faster that AI models progress. While the range of outcomes could be wider, it does not change our conviction in the AI cycle. We remain 'AI maximalists', with the Fund relatively fully invested and strongly pro-AI.

The underlying demand picture supports that optimism. AI-related capex is on track to approach $800bn this year (+94% y/y) and estimates for next year have increased to roughly $1.2trn (+54% y/y). NVIDIA guided to +70% y/y revenue growth for FY28 on its most recent call, an unusually long-dated and confident guide, and said explicitly that growth is capacity- rather than demand-constrained. While share prices have pulled back, earnings estimates across the sector have been revised higher through the year, producing meaningful and, in our view, unwarranted multiple compression. Unlike the dot.com era, this cycle has so far been driven by earnings growth rather than multiple expansion and we think that distinction matters a great deal.

Put simply, we think near-term safety fears, broader macro concerns and unfavourable seasonality (September and pre-midterm election weakness) are keeping investors on the sidelines. We also expect seasonality to turn more supportive soon: since 1980, the S&P 500 has risen in Q4 roughly four years in five, averaging +6.1% after a negative Q3 and +3.7% after a positive one (up 82% and 83% of the time, respectively), according to Macquarie. Positioning is cleaner too: US hedge fund net leverage has fallen to its lowest level since Liberation Day in April 2025 and sits in the second percentile of its five-year range.

Most importantly, AI fundamentals appear to be strengthening, while AI stocks are beginning to respond better to positive data points. We expect upbeat management commentary, strong underlying growth and earnings revisions to provide further support during Q3 earnings season. US midterm elections and the long-awaited Anthropic IPO (if it happens in November) could also act as clearing events. We do not believe gradually rising bond yields alone will derail markets, given their rise appears to be largely due to stronger nominal growth. We therefore expect a more risk-on, pro-AI stance to reassert itself towards the end of the year, absent a macroeconomic or geopolitical shock.

Cut-off	15:00 Irish time

Risks

- **Capital is at risk and there is no guarantee the Fund will achieve its objective. Investors should make sure their attitude towards risk is aligned with the risk profile of the Fund before investing.**
- **Past performance is not a reliable guide to future performance. The value of investments may go down as well as up and you might get back less than you originally invested as there is no guarantee in place.**
- The value of a fund's assets may be affected by uncertainties such as international political developments, market sentiment, economic conditions, changes in government policies, restrictions on foreign investment and currency repatriation, currency fluctuations and other developments in the laws and regulations of countries in which investment may be made. Please see the Fund's Prospectus for details of all risks.
- The fund is exposed to Sustainability risks which are environmental, social and governance factors that could have an actual or potential material negative impact on the value of the Fund and its risk factors.
- The Fund invests in the shares of companies and share prices can rise or fall due to several factors affecting global stock markets.
- The Fund uses derivatives which carry the risk of reduced liquidity, substantial loss, and increased volatility in adverse market conditions, such as failure amongst market participants.
- The Fund invests in assets denominated in currencies other than the Fund's base currency. Changes in exchange rates may have a negative impact on the Fund's investments. If the share class currency is different from the currency of the country in which you reside, exchange rate fluctuations may affect your returns when converted into your local currency. Hedged share classes may have associated costs which may impact the performance of your investment.
- The Fund invests in emerging markets where there is a greater risk of volatility due to political and economic uncertainties, restrictions on foreign investment, currency repatriation and currency fluctuations. Developing markets are typically less liquid which may result in large price movements to the Fund.
- The Fund invests in a relatively concentrated number of companies and industries based in one sector. This focused strategy can produce high gains but can also lead to significant losses. The Fund may be less diversified than other investment funds.

Important Information

This is a marketing communication and does not constitute a solicitation or offer to any person to buy or sell any related securities or financial instruments. Any opinions expressed may change. This document does not contain information material to the investment objectives or financial needs of the recipient. This document is not advice on legal, taxation or investment matters. Tax treatment depends on personal circumstances. Investors must rely on their own examination of the fund or seek advice. Investment may be restricted in other countries and as such, any individual who receives this document must make themselves aware of their respective jurisdiction and observe any restrictions.

A decision may be taken at any time to terminate the marketing of the Fund in any EEA Member State in which it is currently marketed. Shareholders in the affected EEA Member State will be given notification of any decision and provided the opportunity to redeem their interests in the Fund, free of any charges or deductions, for at least 30 working days from the date of the notification.

Investment in the Fund is an investment in the shares of the Fund and not in the underlying investments of the Fund. Further information about fund characteristics and any associated risks can be found in the Fund's Key Information Document or Key Investor Information Document ("KID" or "KIID"), the Prospectus (and relevant Fund Supplement), the Articles of Association and the Annual and Semi-Annual Reports. Please refer to these documents before making any final investment decisions. These documents are available free of charge at Polar Capital Funds plc, Georges Court, 54-62 Townsend Street, Dublin 2, Ireland, via email by contacting Investor-Relations@polarcapitalfunds.com or at www.polarcapital.co.uk. The KID is available in the languages of all EEA member states in which the Fund is registered for sale; the Prospectus, Annual and Semi-Annual Reports and KIID are available in English.

The Fund promotes, among other characteristics, environmental or social characteristics and is classified as an Article 8 fund under the EU's

Important Information (contd.)

Sustainable Finance Disclosure Regulation (SFDR). For more information, please see the Prospectus and relevant Fund Supplement.

ESG and sustainability characteristics are further detailed on the investment manager's website: https://www.polarcapital.co.uk/ESG-and-Sustainability/Responsible-Investing/.

A summary of investor rights associated with investment in the Fund can be found here. This document is provided and approved by both Polar Capital LLP and Polar Capital (Europe) SAS.

Polar Capital LLP is authorised and regulated by the Financial Conduct Authority ("FCA") in the United Kingdom, and the Securities and Exchange Commission ("SEC") in the United States. Polar Capital LLP's registered address is 16 Palace Street, London, SW1E 5JD, United Kingdom.

Polar Capital (Europe) SAS is authorised and regulated by the Autorité des marchés financiers (AMF) in France. Polar Capital (Europe) SAS's registered address is 18 Rue de Londres, Paris 75009, France.

Polar Capital LLP is a registered Investment Advisor with the SEC. Polar Capital LLP is the investment manager and promoter of Polar Capital Funds plc – an open-ended investment company with variable capital and with segregated liability between its sub-funds – incorporated in Ireland, authorised by the Central Bank of Ireland and recognised by the FCA. FundRock Management Company (Ireland) Limited acts as management company and is regulated by the Central Bank of Ireland. Registered Address: Percy Exchange, 8/34 Percy Place, Dublin 4, Ireland.

For UK Investors: The Fund is recognised in the UK under the Overseas Funds Regime (OFR) but it is not a UK-authorised Fund. UK investors should be aware that they may not be able to refer a complaint against its Management Company or its Depositary to the UK's Financial Ombudsman Service. Any claims for losses relating to the Management Company or the Depositary will not be covered by the Financial Services Compensation Scheme, in the event that either entity should become unable to meet its liabilities to investors. For information on the complaint process to the Management Company, please see the Country Supplement for this fund available at https://www.polarcapital.co.uk/

Benchmark The Fund is actively managed and uses the Dow Jones Global Technology Net Total Return Index as a performance target. The benchmark has been chosen as it is generally considered to be representative of the investment universe in which the Fund invests. The performance of the Fund is likely to differ from the performance of the benchmark as the holdings, weightings and asset allocation will be different. Investors should carefully consider these differences when making comparisons. Further information about the benchmark can be found here. The benchmark is provided by an administrator on the European Securities and Markets Authority (ESMA) register of benchmarks which includes details of all authorised, registered, recognised and endorsed EU and third country benchmark administrators together with their national competent authorities.

Third-party Data Some information contained herein has been obtained from third party sources and has not been independently verified by Polar Capital. Neither Polar Capital nor any other party involved in or related to compiling, computing or creating the data makes any express or implied warranties or representations with respect to such data (or the results to be obtained by the use thereof), and all such parties hereby expressly disclaim all warranties of originality, accuracy, completeness, merchantability or fitness for a particular purpose with respect to any data contained herein.

Country Specific Disclaimers Please be aware that not every share class of every fund is available in all jurisdictions. When considering an investment into the Fund, you should make yourself aware of the relevant financial, legal and tax implications. Neither Polar Capital LLP nor Polar Capital Funds plc shall be liable for, and accept no liability for, the use or misuse of this document.

The Netherlands This factsheet is for professional client use only in the Netherlands and it is intended that the Fund will only be marketed to professional clients in the Netherlands. Polar Capital Funds plc is authorized to offer shares in the Polar Capital Funds plc - Global Technology Fund to investors in the Netherlands on a cross border basis and is registered as such in the register kept by the Dutch Authority for the Financial Markets ("AFM") www.afm.nl.

Austria / Belgium / Denmark (professional only) / Finland / France / Germany / Gibraltar / Guernsey / Ireland / Italy (professional only) / Jersey / Liechtenstein / Luxembourg / Netherlands / Norway / Portugal / Spain / Sweden / Switzerland and the United Kingdom The Fund is registered for sale to all investors in these countries.

Morningstar Medalist Rating The Morningstar Medalist Rating™ is the summary expression of Morningstar's forward-looking analysis of investment strategies as offered via specific vehicles using a rating scale of Gold, Silver, Bronze, Neutral, and Negative. The Medalist Ratings indicate which investments Morningstar believes are likely to outperform a relevant index or peer group average on a risk-adjusted basis over time. Investment products are evaluated on three key pillars (People, Parent, and Process) which, when coupled with a fee assessment, forms the basis for Morningstar's conviction in those products' investment merits and determines the Medalist Rating they're assigned. Pillar ratings take the form of Low, Below Average, Average, Above Average, and High. Pillars may be evaluated via an analyst's qualitative assessment (either directly to a vehicle the analyst covers or indirect-ly when the pillar ratings of a covered vehicle are mapped to a related uncovered vehicle) or using algorithmic techniques. Vehicles are sorted by their expected performance into rating groups defined by their Morningstar Category and their active or passive status. When analysts directly cover a vehicle, they assign the three pillar ratings based on their qualitative assessment, subject to the oversight of the Analyst Rating Committee, and monitor and reevaluate them at least every 14 months. When the vehicles are covered either indirectly by analysts or by algorithm, the ratings are assigned monthly. For more detailed information about these ratings, including their methodology, please go to global.morningstar.com/managerdisclosures/.

The Morningstar Medalist Ratings are not statements of fact, nor are they credit or risk ratings. The Morningstar Medalist Rating (i) should not be used as the sole basis in evaluating an investment product, (ii) involves unknown risks and uncertainties which may cause expectations not to occur or to differ significantly from what was expected, (iii) are not guaranteed to be based on complete or accurate assumptions or models when determined algorithmically, (iv) involve the risk that the return target will not be met due to such things as unforeseen changes in management, technology, economic development, interest rate development, operating and/or material costs, competitive pressure, supervisory law, exchange rate, tax rates, exchange rate changes, and/or changes in political and social conditions, and (v) should not be considered an offer or solicitation to buy or sell the investment product. A change in the fundamental factors underlying the Morningstar Medalist Rating can mean that the rating is subsequently no longer accurate.
